

MAGNA-PLATE 200 NM SERIES

PRODUCT DESCRIPTION

JAX Magna-Plate 200 NM is a premium product compounded for severe industrial applications where high loads and ambient conditions cause premature wear and failure to heavy-duty industrial chains.

LUBRICATION APPLICATIONS

Conventional oils pick up dust, forming abrasive grinding compounds which accelerate wear and reduce chain life. JAX Magna-Plate 200 NM lubricant will penetrate, leaving outer surfaces comparatively dry. The additives are attracted to and deposited into the pores of the metal at the points where wear will occur first. After the oil has penetrated, the chains will appear to have a high polish. Close inspection will reveal a solid film of lubricant with no signs of scuffing, scoring, or flaking on the load-carrying surfaces. JAX Magna-Plate 200 NM is available in four ISO grades.

JAX Magna-Plate 200 NM is formulated with:

- High Quality Base Oils
- Antiwear Additives
- Extreme-Pressure Additives
- Rust Inhibitors
- Pour Point Depressant
- Synthetic Tackifier

CONTAINER SIZES & PART NUMBERS

Product part numbers consist of the prefix number listed below each product at the top of the page, plus the suffix shown behind each container size below. (Part # - container size) Please note that not all products are available in all container sizes.

Container Sizes	Part #
275 Gallon Tote - 275	MP2NMx-275
110 gallon Tote - 110	MP2NMx-110
55 Gallon Drum - 055	MP2NMx-055
16 Gallon Keg - 016	MP2NMx-016
5 Gallon Pail - 005	MP2NMx-005
4 - 1 Gallon Case - 004	MP2NMx-004
